Ranger gives you freedom:

- Ranger is the universal check scanning language that applications can use to drive almost any check scanner. This means you can support a greater number of scanners without additional development efforts.
- Ranger is a Rapid Application Development (RAD) tool that reduces development time and maintenance costs.

Ranger detects image defects at the source:

- Ranger Image Quality Analysis (IQA) tests are in compliance with FSTC and ANSI X9B standards.
- IQA is a standard part of the Ranger toolkit and is available to you at no additional cost.

We make your life easier:

- Silver Bullet's technical support team is knowledgeable and has experience with over 60 of the market's most popular check scanners.
- Silver Bullet's technical support team is courteous and responsive. Most Ranger questions are answered the same day, and most Ranger bugs are fixed in less than three days.
